in the post world war ii era louisiana s coastal wetlands underwent an industrial transformation  
 that placed the region at the center of america s energy producing corridor by the twenty first  
 century the louisiana gulf coast supplied nearly one third of america s oil and gas accounted  
 for half of the country s refining capacity and contributed billions of dollars to the u s economy  
 today thousands of miles of pipelines and related infrastructure link the state s coast to oil and  
 gas consumers nationwide during the course of this historic development however the  
 dredging of pipeline canals accelerated coastal erosion currently 80 percent of the united  
 states wetland loss occurs on louisiana s coast despite the fact that the state is home to only  
 40 percent of the nation s wetland acreage making evident the enormous unin tended  
 environmental cost associated with producing energy from the gulf coast in american energy  
 imperiled coast jason p theriot explores the tension between oil and gas development and the  
 land loss crisis in louisiana his book offers an engaging analysis of both the impressive albeit  
 ecologically destructive engineering feats that characterized industrial growth in the region and  
 the mounting environmental problems that threaten south louisiana s communities culture and  
 working coast as a historian and coastal louisiana native theriot explains how pipeline  
 technology enabled the expansion of oil and gas delivery examining previously unseen  
 photographs and company records and traces the industry s far reaching environmental

footprint in the wetlands through detailed research presented in a lively and accessible narrative that ties together decades of political, economic, social, and cultural undertakings that clashed in the 1980s and 1990s when local citizens, scientists, politicians, environmental groups, and oil and gas interests began fighting over the causes and consequences of coastal land loss. The mission to restore coastal Louisiana ultimately collided with the perceived economic necessity of expanding offshore oil and gas development at the turn of the twenty-first century. This book bridges the gap between these competing objectives from the discovery of oil and gas below the marshes around coastal salt domes in the 1920s and 1930s to the emergence of environmental sciences and policy reforms in the 1970s to the vast repercussions of the BP Deepwater Horizon oil spill in 2010. American energy imperiled the coast, ultimately revealing that the natural and man-made forces responsible for rapid environmental change in Louisiana's wetlands over the past century can only be harnessed through collaboration between public and private entities.

Businesses and designers both want to create value. What could go wrong? Time and again, ambitious design projects within organizations fail to deliver the sort of impact designers believe is possible, and managers say they want it. At the root of such failures are basic disconnects between how managers and designers view the world. Managers often look to design to increase financial value, while designers typically see their profession as creating value for users and society. Countless opportunities to address pressing ethical, social, and environmental concerns die in the gap between the two, as managers and designers misconstrue each other's intent and misunderstand each other's needs. How can both do better? The answer lies in redesigning value, drawing from real-world examples and insights from over one hundred designers, design experts, leaders of design labs, and design skeptics at leading organizations including Google, CNN, Citi Bank, Fidelity Insurance, The Mayo Clinic, and Shopify. The book provides a road map from leaders who have been there and a practical manifesto to inspire the sort of action our world so sorely needs.
